20. Reported Cases of Selected Communicable Diseases by Month. 85
21. Selected Characteristics of Resident Induced Abortions 86

INTRODUCTION

This report contains a summary of the Vital Statistics of the State of Maine for the calendar year of 1980. Births are tabulated for each county and all minor civil divisions and deaths are tabulated for each county and 45 selected minor civil divisions.

ALLOCATION OF VITAL EVENTS

The statistics on births in this report refer to residents of Maine only, regardless of whether or not the birth actually occurred in Maine. With the exceptions of Tables 3 and 9, death statistics also refer to residents of Maine only. Except for Table 18, statistics on marriages include non-residents as well as residents of Maine who marry in the State. All statistics on divorces include non-residents as well as residents who are divorced in Maine.

Births are allocated to the usual residence of the mother and deaths to the usual residence of the deceased. This information is obtained for the certificate by the physician, hospital record librarian, funeral director, or other person responsible for completing the certificate of birth or death. The practice of allocating births and deaths to usual place of residence was initiated in 1935. This method of allocation is made possible by the exchange of transcripts of non-resident births and deaths with other states and Canada.

All occurrence data for marriages and divorces are distributed to the place in Maine where the marriage ceremony was performed or where the divorce decree was granted, rather than the place of residence.

FACTORS AFFECTING ACCURACY

Several factors may produce certain slight inaccuracies in this report. Some of the more important of these factors are outlined below:

(1) Completeness of Registration: A birth certificate test conducted in 1950 indicated that about one percent of births in Maine are not recorded. In addition to unrecorded vital events, others may not be included in this report by reason of failure of the person required to report the event to make a timely report, or failure of a municipal clerk to make a timely report to the State Registrar, or failure of other states to make timely exchanges of nonresident transcripts of births and deaths.

(2) Errors in Data: Data in this report are based upon original certificates of births and deaths, copies of original certificates of marriages prepared by city and town clerks, and abstracts of decrees of divorces prepared by the clerks of courts. Errors in data may be introduced by persons giving information for the original certificate, persons involved in the actual preparation of the original certificate, persons involved in the preparation of the copies or abstracts of the original certificates, or persons involved in coding and computer processing of the data.

MORTALITY CLASSIFICATION

The mortality classification, used in this report, is the 9th Revision of the International Classification of Diseases consisting of a list of 722 categories of diseases and morbid conditions, plus 192 categories for classification of the external cause of injury, and 190 categories for the characterization of injuries according to the nature of lesion.

Under the 9th Revision, the method for selecting the cause of death for statistical purposes remained the same as the method under the 6th Revision. The 6th Revision, introduced in 1949, instituted a method whereby the physician in attendance at death indicates the disease or morbid condition which he considers to be the underlying cause of death. The underlying cause is defined as "(a) the disease or injury which initiated the train of events leading directly to death, or (b) the circumstances of the accident which produced fatal injury."

Two abridged lists of causes of death are presented in this report. Deaths by selected age groups are tabulated in an abridged list of 282 causes and deaths by residence are tabulated in an abridged list of 72 causes.

RATES

Birth rates and crude mortality rates, unless otherwise specified, are expressed as the number of births or deaths per 1,000 population. Mortality rates attributed to specific diseases are expressed as the number of deaths per 100,000 population. Infant mortality rates are expressed as the number of deaths per 1,000 live births. Maternal mortality rates are expressed as the number of deaths per 10,000 live births.

POPULATION

Based on the 1980 U.S. Census count the population of Maine was 1,125,027 on April 1, 1980. This is a net gain in population of 131,305 or 13.2 percent more than the number of inhabitants enumerated in the 1970 U.S. Census report. The net migration was 75,613 and the rate was 74.0 per thousand population. The natural increase, which is the difference between total births and total deaths, was 55,692. Compared with the previous decade, the natural increase was 37,080 less but the net migration was 143,987 greater.

Only one county, Aroostook, lost population during the decade. The population of Aroostook County decreased by 2,747 or 2.9 percent and had a net outward migration of 115.9 per thousand population. The largest growth was in York County, which increased 28,090 or 25.2 percent. However, Lincoln County had the highest net migration rate, which was 228.2 per thousand population. The base used to compute migration rates is the 1970 population plus one half of the natural increase.

The age distribution of Maine in Table 2 shows that 140,981, or 12.5 percent of the population, are 65 or older and that 321,451, or 28.6 percent, are less than 18. The population 65 and over has increased 23.0 percent since 1970 and the population under 18 has decreased 6.5 percent since 1970.

TABLE 1
COMPONENTS OF POPULATION CHANGE BY COUNTY
MAINE, 1970 - 1980

York	139,666	9,896	30,408	54,207	27,385	17,770

LIVE BIRTHS

There were 16,474 resident live births registered in Maine in 1980. The number of live births increased 0.2 percent from 1979, but the birth rate decreased 1.4 percent, to 14.6 per 1,000 population.

SEX

The number of male live births was 8,542 and the number of female live births was 7,932. The sex ratio of live births was 107.7 male live births for every 100.0 female live births.

PLURAL BIRTHS

In 1980, there were 293 children born alive in plural births.

RACE

Only 1.5 percent of all resident live births in 1980 were nonwhite. The total number of nonwhite births in 1980 was 250. This is a decrease of 5.3 percent from the number of resident nonwhite live births in 1979. This decrease in nonwhite births was consistent for American Indians, Blacks and other nonwhite races as well.

The largest nonwhite group was American Indian, who gave birth to 84 live born children. Blacks gave birth to 68, and persons of other nonwhite races gave birth to 98 live born children.

LEGITIMACY

There were 2,277 illegitimate births to mothers who were Maine residents in 1980. Illegitimate live births represented 13.8 percent of all resident live births. With the exception of 1971, the percent of births that are illegitimate has increased in every year since 1960.

HOSPITAL BIRTHS

The number of resident live births in hospitals in 1980 was 16,271 or 98.8 percent of all resident live births.

TERMINATIONS OF PREGNANCY

The total number of terminations of pregnancy reported as occurring in Maine in 1980 was 4,670. There were 134 terminations of pregnancy reported on fetal death records, of which 17 were spontaneous abortions and 117 were other fetal deaths. There were 4,536 terminations reported on abortion records of which 509 were spontaneous abortions. A specific reporting form for abortions (induced and spontaneous) was introduced in 1978. Total terminations of pregnancy increased 8.1 percent over 1979. However, most of the increase in terminations of pregnancy is in spontaneous abortions, which is probably due to more complete reporting of spontaneous abortions. Induced abortions increased only 1.6 percent over last year (1979).

Of the 4,027 induced abortions occurring in Maine, 3,594 were to legal residents of Maine; 433 were nonresidents. Of the 433 nonresidents, 362 were Canadians. The resident induced abortion rate was 218 per thousand live births.

The highest induced abortion rate (315) was in Cumberland County. Other counties with significantly high rates were Penobscot (297) and Hancock (291.7). The lowest induced abortion rate (116.1) was in Aroostook County. Other counties with significantly low rates were York (150.4), Oxford (128.9), Somerset (161.4), Androscoggin (179) and Kennebec (180.7). Characteristics of induced abortions by county are shown on Table 21.

GENERAL MORTALITY

There were 10,768 deaths of Maine residents in 1980. The crude mortality rate was 9.6 per 1,000 population, an increase of 4.3 percent from 1979.

SEX

In 1980 the number of resident male deaths was 5,711 and the number of resident female deaths was 5,057. The estimated death rate among males was 10.5 per 1,000 male population and among females was 8.7 per 1,000 female population.

INFANT DEATHS

There were 154 infant deaths in Maine during 1980 and the infant mortality rate was 9.3 per 1,000 live births. This was a 3.7 percent decrease in number from 1979 and 4.1 percent decrease in rate. The infant mortality rate has decreased 55.5 percent since 1970, 63.1 percent since 1960, 70.2 percent since 1950, and 82.4 percent since 1940.

There were 97 neonatal deaths (infant deaths during the first four weeks of life) in 1980 and the neonatal mortality rate was 5.9 per 1,000 live births. This was an increase in number of 1.0 percent since 1979.

PERINATAL MORTALITY

The estimated perinatal mortality rate in 1980 was 12.8 perinatal deaths per 1,000 live births and fetal deaths of twenty weeks or more gestation.

The perinatal mortality rate is based on the following formula:

$$\frac{\text{Fetal deaths 20 weeks or more + neonatal deaths}}{\text{Total live births + fetal deaths 20 weeks or more}} \times 1{,}000$$

The 1980 perinatal mortality rate is based on 117 fetal deaths of 20 or more weeks gestation and 97 neonatal deaths.

MATERNAL MORTALITY

There were no maternal deaths in Maine in 1980.

MARRIAGES

There were 12,040 marriages occurring in Maine in 1980. Of this number, 10,996 or 91.3 percent were marriages in which the bride and/or the groom were residents of Maine. The occurrence marriage rate was 10.7 per 1,000 population, the same as in 1979.

There were 10,996 resident brides in 1980, of which 72.3 percent were natives of Maine. There were 10,587 resident grooms of which 70.4 percent were natives of Maine. About 24.1 percent of the resident brides, and 9.8 percent of the resident grooms were under 20 years of age. About 65.2 percent of the resident brides were married for the first time and 63.4 percent of the resident grooms were married for the first time.

Civil ceremonies were performed in 38.6 percent of the resident marriages in 1980. There were 151 resident mixed marriages in 1980, a decrease of 10.1 percent from last year.

DIVORCES AND ANNULMENTS

There were 6,189 divorces granted in Maine during the calendar year 1980. This was 31 more than the number of divorces granted in 1979. The crude divorce rate was 5.5 per 1,000 population. There were 16 marriages annulled in 1980.

PLAINTIFF

The wife was the plaintiff in 69.5 percent of the divorces, and the husband in 30.4 percent.

LEGAL GROUNDS FOR DECREE

Cruelty was the legal grounds for decree in 9.7 percent of all divorces granted in Maine in 1980. Cruelty includes "cruel and abusive treatment" and "extreme cruelty." "Differences" was legal grounds for decree in 89.9 percent of the divorces.

DURATION OF MARRIAGE

The median duration of marriage before divorce in 1980 was 6.4 years. The second year of marriage was the peak year during which marriages were ended by divorce.

MINOR CHILDREN

The divorced couple had one or more minor children in 3,619 or 58.5 percent of 1980 divorces. Fourteen divorced couples had 6 or more minor children.

LEADING CAUSES OF DEATH

In Table 7, "Life Lost" is based on expectation of life from a 1978 United States Life table for white population. The death of an infant represents a total of 74.0 years of life lost. The death of a 50 year old person represents 27.8 years of life lost and the death of a 90 year old person represents 3.1 years of life lost.

When one examines the leading causes of death in terms of "Life Lost" rather than total deaths, an entirely different picture is presented. "Certain Conditions Originating in Perinatal Period", which caused only 0.7 percent of total deaths caused 4.7 percent of total "Life Lost" in 1980, and jumped from 12th place in total deaths to 5th place in total life lost. "Congenital Anomalies" which was in 14th place in total deaths, was in 8th place in total "Life Lost". Death from "Suicide" was in 10th place in total deaths but in 7th place in total "Life Lost". The most prominent shift in the other direction was "Arteriosclerosis" which was in 7th place in total deaths and in 12th place in total "Life Lost".

The "Life Lost" rates for "Pneumonia and Influenza", "Cerebrovascular Disease" and "Chronic Obstructive Lung Disease" increased over 1979 by 23.8 percent, 15.9 percent, and 15.8 percent respectively.

The largest decreases in "Life Lost" rates were "Congenital Anomalies", which decreased by 28.9 percent from 1979, followed by "Nephritis, Nephrotic Syndrome and Nephrosis" and "Suicide", which decreased 14.3 percent and 12.5 percent respectively.

ACCIDENTS

Accidents occurring in Maine in 1980 accounted for 534 deaths. Of these accidents, 50.6 percent happened on Maine's streets and highways and 19.9 percent happened at home. In 8.8 percent of the accidents, the victim was considered to be working at the time of occurrence.

The state death rate for accidents, occurring in Maine, was 47.5 deaths per 100,000 population. Somerset and Waldo Counties had significantly higher rates in 1980 than the State as a whole.
